

CUSTOMER SERVICE CHATBOT

Trigger: Google Forms

Create a Google Form to collect customer service requests. The form should include the following fields:

- Customer Name
- Email
- Issue Description
- Optional File Upload

Action 1: Google Sheets

Automatically insert the information received from Google Forms (Customer Name, Email, Issue Description) into a Google Sheet for tracking and future reference.

Action 2: Delay by Zapier

Add a delay of 2 hours before responding to the customer.

Action 3: ChatGPT

Use AI to generate a response to the customer's issue based on the Issue Description field. The AI should analyze the issue and create a relevant and professional response.

Action 4: Gmail

Send the email back automatically to the customer. The email should contain: customer's name, ai response.
